

SRI's Center for Innovation Strategy & Policy

Complex Program Evaluation

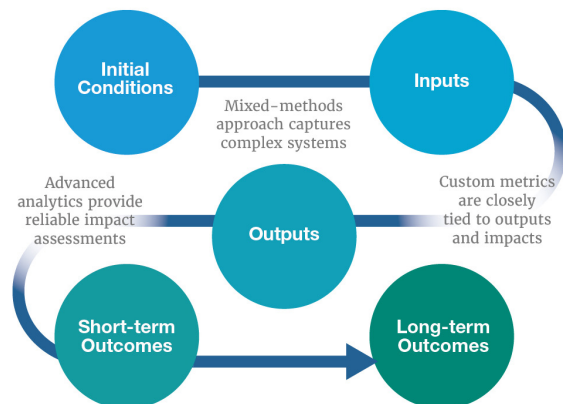

Use of qualitative and quantitative methods to evaluate and improve policy and program performance

SRI specializes in the evaluation of complex programs that pursue several goals with multiple components. SRI starts with a customized logic model that informs our mixed-methods approach. The approach combines qualitative methods to examine the context of the program and quantitative methods to provide data-driven evidence to answer evaluation questions. This yields a complete picture of program impact and provides guidance on possible program improvements.

CISP's client services specific to this practice area include:

- Develop unique logic models
- Design custom, multi-method approaches
- Identify novel administrative datasets
- Define unique measurement tools that capture outputs and outcomes
- Apply advanced data analytics
- Formulate useful recommendations for improvement
